

## UNIT 5 - ELECTROCHEMISTRY

### Lesson 9

# Corrosion of Iron

## Learning Goals

- ❑ I will be able to explain the corrosion of iron in terms of an electrochemical process, and describe some corrosion-inhibiting techniques.

# Corrosion of Iron

AIR

WATER

IRON

A diagram illustrating the environment for iron corrosion. It is divided into three horizontal regions. The top-left region is white and labeled 'AIR'. The top-right region is light blue and labeled 'WATER'. The bottom region is gray and labeled 'IRON'. A curved line separates the air and water regions, and a horizontal line separates the water and iron regions.

# Corrosion of Iron

# Preventing the Corrosion of Iron

## 1. Protective Coating (paint, oil, etc)

- isolates the iron from the oxidizing agent (oxygen and water)

# Preventing the Corrosion of Iron

## 2. Cathodic Protection

- provides a replacement source of electrons for the iron

### A. Sacrificial Anode

- attach a more reactive metal to the iron

# Preventing the Corrosion of Iron

## 2. Cathodic Protection

- provides a replacement source of electrons for the iron

### A. Sacrificial Anode

- attach a more reactive metal to the iron

### B. Impressed Current

- attach the negative terminal of a current source to the iron

# Preventing the Corrosion of Iron

## 3. Galvanization

- coating the iron with zinc
- zinc is a protective coating and a sacrificial anode

# Success Criteria

- ❑ I can explain the corrosion of iron in terms of an electrochemical process, and describe some corrosion-inhibiting techniques.

## WORK:

- Read **section 10.6** in textbook.
- Do questions **1 to 7** on page 662.
- Check your **answers** and **review** as necessary.
